# Office Action Summary

Application No.

10/796,009

Applicant(s)

TANIZAWA ET AL.

Examiner

Michael D. Masinick

Art Unit

2125

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 26 April 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-8 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-8 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 10 March 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

## Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some \* c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date 4/26/2004.
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_.

### DETAILED ACTION

Claims 1-8 are pending in this application.

#### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

1. Regarding claims 1, 2, 4, 5, 6 and 7, the phrase "etc." renders the claim indefinite because it is unclear whether there are to be additional limitation(s) that are not mentioned in the claims and are part of the claimed invention. See MPEP § 2173.05(d).
2. Claim 6 recites the limitation "corresponding to the selected input contact". There is insufficient antecedent basis for this limitation in the claim. Examiner also notes that this claim is difficult to understand as written and is not further treated on the merits.

#### *Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-5, and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 5,801,942 to Nixon et al in view of U.S. Patent No. 6,272,398 to Osborne et al.

Art Unit: 2125

5. Referring to claims 1 and 2, Nixon shows a sequence circuit display method comprising selectively inputting an operating step name from an input device (Column 9, lines 13-32) to thereby display a sequence circuit including contacts, coils, etc. corresponding to the selected input operating step as a ladder diagram on a display device (Column 33, line 52 – Column 34, lines 26). Nixon shows a selection of modules in Figures 23 A-D.

6. Nixon does not show that these steps are specifically done corresponding to an injection molding machine.

7. Osborne shows a programmable system for creating programs for injection molding machines. Osborne is only used as a reference to show that PLC programming systems and display devices are known in the art of injection molding and are commonly used.

8. It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the device programming and display method of Nixon to view the ladder logic and sequence circuit programs for injection molding machines because “high level languages are not usually used or understood by process engineers, maintenance engineers, control engineers, operators and supervisors” and the simplicity of the ladder logic viewing system allows these people a “graphical view of the elements of the process control system that enables them to view the system in terms relevant to their responsibilities.” Furthermore, Nixon shows “Process control systems have widespread application in the automation of industrial processes such as the processes used in chemical, petroleum, and manufacturing industries, for example.” Column 2 of Nixon shows the full use of this system and the ways in which process control devices are used in the industry.

Art Unit: 2125

9. Referring to claims 3 and 5, Nixon shows wherein said display of contacts, coils, etc. of said ladder diagram in said display device comprises displaying operating step names in the injection molding machine (Figure 23B).

10. Referring to claim 4 and 7, Nixon shows wherein said display of contacts, coils, etc. of said ladder diagram in said display device comprises selectively displaying one of: an active display screen for displaying connection states of said contacts, coils, etc. along with operations of the injection molding machine in real time and a still display screen displaying the connection states of said contacts, coils, etc. at a certain point of time in operation of the injection molding machine ("The Ladder Logic program 2270 supports ladder logic simulation, historical data collection and mode, alarm and status report generation" – Column 34, lines 39-42).

11. Claims 1, 2, and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over "Circuit Monitor Function Unit (SFC Monitor) by Toyoda Machine Works Ltd (Hereafter "Toyoda") in view of U.S. Patent No. 6,272,398 to Osborne et al.

12. Referring specifically to claim 8, Toyoda shows a sequence circuit display method comprising: displaying a sequence circuit as a ladder diagram on a display device, wherein by a contact selection instruction and coil search instruction for the contact in the ladder diagram being given, a sequence circuit including coils corresponding to the contact is displayed as a ladder diagram on the display device, or wherein by a coil selection instruction and contact search instruction for the coil in the ladder diagram being given, a sequence circuit including contacts corresponding to the coil is displayed as a ladder diagram on the display device (Section

Art Unit: 2125

3.2.2.2 through section 3.2.4). Examiner notes that because of Japanese language pack issues, the true PDF document could not be printed and came up with many pages blank. The HTML file was printed as well in order to obtain the text of the document and is included with the document as well.

13. Claims 1 and 2 are also clearly shown in the above passages as well as throughout the remainder of the document.

14. Toyoda does not show that this system is to be used with an injection molding machine.

15. Osborne shows a programmable system for creating programs for injection molding machines. Osborne is only used as a reference to show that PLC programming systems and display devices are known in the art of injection molding and are commonly used.

16. It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the sequence display search functions of Toyoda with an injection machine because ladder design and control systems are well known in the process control arts to provide a simple programming interface. The Toyoda system is designed with industrial process control in mind in many shapes, of which injection molding is one.

### *Conclusion*

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael D. Masinick whose telephone number is (571) 272-3746. The examiner can normally be reached on Mon-Fri, 7:30-4:00.

Art Unit: 2125

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Leo Picard can be reached on (571) 272-3749. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
